The Current Ratio is the general measure of a company's liquidity. It represents the ratio of all current assets to all current liabilities. It is sometimes called the "Working Capital Ratio" because working capital is the excess of current assets over current liabilities. Current ratio is lower than the same period last year due to disposal of shares in the Philippines stock market.

The Quick Ratio is another measure of a company's liquidity. It is used to measure a company's ability to pay its liabilities using assets that are cash or very liquid. Since the Company does not have any marketable securities and accounts receivables, the computation of this ratio was based on cash alone. Quick ratio for the current period is extremely higher as compared to the same period of last year due to cash proceeds from sale of shares traded in the stock market.

The Debt to Equity Ratio is a measure of leverage, or the relative amount of funds provided by lenders and owners. This measures the amount of debt being used by the Company. The ratio for the current period is higher as compared to last year due to increase in advances from third parties to fund operating expenses.

Book value Per Share is a measure of stockholders' equity. It represents the difference between total assets and total liabilities divided by the total number of shares outstanding. Book value as of June 30, 2013 is lower as compared to the same period last year due to losses incurred from sale of shares traded in the stock market.

Net Profit Margin Ratio related the profits of a company to its sales, assets or equity. It indicates the rate of profit from sales and other revenues. The Company is still in a no-operation status. The reported revenues are purely interests earned from bank deposits.

(2) Income before Interest and Taxes / Interest Expense
June 2013
June 2012
(3) Gross Profit / Sales
June 2013
June 2012

Asset to Equity ratio measures the financial leverage and long term solvency of the Company. It is derived by dividing the total asset from its total equity. The increase in ratio is due to disposal of shares traded in the stock market and corresponding losses incurred which attributes to the increase in deficit resulting to lower equity.

Interest Coverage Ratio determines how easily a company can pay interest on outstanding debt. The Company did not incur any interest on its advances.

Gross Profit Margin is derived by dividing its gross profit by its sales. The Company is still in a no-operation status. The reported revenues are purely interests earned from bank deposits.

6. CAPITAL STOCK

To address the Company's liquidity shortfalls and raise the needed fund for investment into Abacoal, the Company increased its authorized capital stock from Fifty Million Pesos (₱50,000,000.00) divided into Fifty Million (50,000,000) shares to One Hundred Million Pesos (₱100,000,000.00) divided into One Hundred Million (100,000,000) shares, both with a par value of One Peso (₱1.00) per share. The capital increase was approved by the Securities and Exchange Commission on 30 July 2009. To fund the capital increase, the Company entered into private placement transactions with several investors at the price of ₱1.20 per share. Full payment was made to the Company during the first quarter of 2010. Said shares were approved by the Philippine Stock Exchange for listing on July 14, 2010.

On November 6, 2009, the Company entered into another set of investment agreements with various investors wherein the investors agreed to subscribe by way of private placement to 10 million common shares of stock to be issued out of the unissued and unsubscribed portion of the authorized capital stock of the Company. The shares were subscribed at a price of ₱5.05 per share or for a total of ₱50.5 million, of which 25% or ₱12.6 million has already been paid. The transaction was approved by the BOD on September 14, 2009. The balance of 75% of the gross investment amount was paid in March 2011. Listing application for such shares is currently pending with the PSE.

On Sept. 14, 2010, SEC approved the reduction in the par value of the shares of stock from One Peso (₱1.00) to Ten Centavos (₱0.10). Also on the same date, the SEC approved the Amended By-laws providing for the creation, powers and functions of the Nomination, Remuneration, Audit, Executive and Finance Committees of the Company.

Per the records of the Corporation, on 24 September 2010, as a result of the approval of the reduction in the par value of the shares of the Company from One Peso (₱ 1.00) per share to Ten Centavos (₱ 0.10) per share, the Philippine Stock Exchange implemented the reduction in the par value and stock split of Lodestar shares. After the reduction in the par value of the shares from One Peso (₱ 1.00) to Ten Centavos (₱0.10) the number and price of shares have been adjusted by multiplying the number of shares by ten (number of shares x 10) and inversely, dividing the price by ten (price/10). 7. RISK MANAGEMENT

The Company is exposed to a variety of financial risks which resulted from its investing and operating activities. The Company's risk management is coordinated in close cooperation with the BOD, and focuses on actively securing the Company's short-to-medium-term cash flows by minimizing the exposure to financial markets.

The Company does not actively engage in the trading of financial assets for speculative purposes nor does it write options. The most significant financial risks to which the Company is exposed to are described below.

Credit Risk

Credit risk is the risk that a counter party fails to discharge an obligation to the Company. The Company is exposed to this risk for its financial assets (i.e. cash and receivables)

Generally, the maximum credit risk exposure of financial asset is the carrying amount of cash and receivables as shown on the face of the balance sheets.

	June 30, 2013	Dec. 31, 2012

Advances to a stockholder	4,076,772	4,076,772
	₱ 6,002,481	₱ 7,483,197

The Company's cash is actively monitored to avoid significant and unwarranted exposure to credit risk. Cash in bank is secured by an insurance from the PDIC up to ₱500,000 per banking institution. Moreover, the credit risk for the Company's cash in bank is considered negligible since the counterparty is a reputable bank with high liquid credit ratings.

Fair Value Hierarchy

The financial assets and liabilities measured at fair value in the statements of financial position are categorized in accordance with the fair value hierarchy. This hierarchy groups financial assets and liabilities into three levels based on the significance of inputs used in measuring the fair value of the financial assets and liabilities. The fair value hierarchy has the following levels.

Level 1: quoted (unadjusted) prices in active markets for identical assets or liabilities

Level 2: inputs other than quoted prices included within Level 1 that are observable for the asset or liabilities, either directly (i.e. as prices) or indirectly (i.e. derived from prices); and,

Level 3: inputs for the asset or liability that are not based on observable market data (unobservable inputs).

The level within which the financial asset or liability is classified is determined based on the lowest level of significant input to the fair value measurement.

As of December 31, 2011 (nil in 2012), AFS financial asset is the only financial asset measured at fair value in the statement of financial position and the value is determined under Level 1. There were no financial liabilities measures at fair value as of June 30, 2013 and December 31, 2012.

There were no transfers between level 1 and 2 in both periods.

10. **COMPLIANCE WITH SEC MEMORANDUM CIRCULAR No. 3, Series of 2012**

PFRS9, *Financial Instruments: Classification and Measurement (* effective from January 1, 2015). This is the first part of a new standard on classification and measurement of financial assets and financial liabilities that will replace PAS 39 in its entirety. This chapter deals with two measurement categories for financial assets: amortized cost and fair value. All equity instruments will be measured at fair value while debt instruments will be measured at amortized cost only if the entity is holding it to collect contractual cash flows which represent payment of principal and interest. The accounting for embedded derivatives in host contracts that are financial assets is simplified by removing the requirement to consider whether or not they are closely related, and, in most arrangement, does not require separation from the host contract.

For liabilities, the standard retained most of the PAS 39 requirements which include amortized-cost accounting for most financial liabilities, with bifurcation of embedded derivatives. The main change is that, in case where the fair value option is taken for financial liabilities, the part of a fair value change due to an entity's own credit risk is recorded in other comprehensive income rather than in profit or loss, unless this creates an accounting mismatch.

To date, other chapters of PFRS 9 dealing with impairment methodology and hedge accounting are still being completed.

The Company does not expect to implement and adopt PFRS 9 until its effective date or until all chapters of this new standard have been published. Based on Management's current assessment, this standard has no significant impact to the Company's financial statement except for potential reclassification of fair value gain (losses) on available-for-sale financial assets recorded in other comprehensive income to profit or loss. The Company will continue to assess the possible effect of this standard considering the impact of all changes until its implementation in 2015.
